Abstract

Shaping pulley assembly for belt notching machine

A shaping pulley assembly (6) for a belt notching machine, including on a frame (1) a pair of driving and shaping pulleys (3, 4) for a grinding belt (5), comprises a shaping pulley holder element (9) like a fork supported by the frame (1), having a C-shaped body with end brackets (90, 91), a stationary centre and a removable counter-centre, both being live centres which are housed in respective said housings of the end brackets (90, 91), a shaping pulley (4) in the form of a cylindrical roller provided with centre holes (42, 43) opposite to each other for fixed centre and removable counter-centre, respectively on the bases (40, 41) of the shaping pulley.
